Creating Developer Account

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details:

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

Create Jewel Customer Object

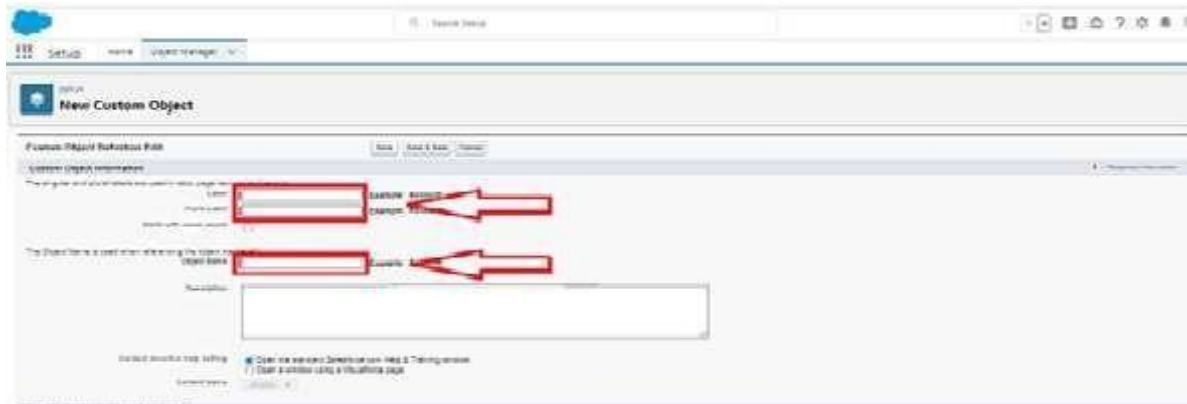

The purpose of creating a Jewel Customer custom object is to store and manage information about Customer.

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

1. Enter the label name: Jewel Customer
2. Plural label name: Jewel Customers

3. Enter Record Name Label and Format
 - Record Name >> Customer name
 - Data Type >> Text

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, tooltips, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always labeled "Name" when referenced via the API.

Record Name: Example: Account Name

Data Type:

Optional Features

- ☒ Allow Reports
- ☐ Allow Activities
- ☐ Track Field History
- ☐ Allow in Chatter Groups
- ☐ Enable Licensing

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more](#)

- ☒ Allow Sharing
- ☒ Allow Bulk API Access
- ☒ Allow Streaming API Access

Deployment Status

☐ In Development

☒ Deployed

[What's New?](#)

2. Click on Allow reports.
3. Allow search and click Save.

Create Item Object

The purpose of creating a Item object is to manage the inventory of gold and silver items.

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
 1. Enter the label name >> Item
 2. Plural label name >> Items
 3. Enter Record Name Label and Format
 - Record Name >> Item Id
 - Data Type >> Auto Number
 - Display Format >> Item- {00}
 - Starting Number >> 1
2. Click on Allow reports.
3. Allow search >> Save.

Note: Create 3 more objects with label names as Customer Order, Price, Billing (Use “Auto Number” as a data type for Customer Order, Price, Billing).

Creating a Custom Tab

To create a Tab:(Customer)

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)
2. Select Object(Jewel Customer) >> Select any tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as

To create a Tab:(Item)

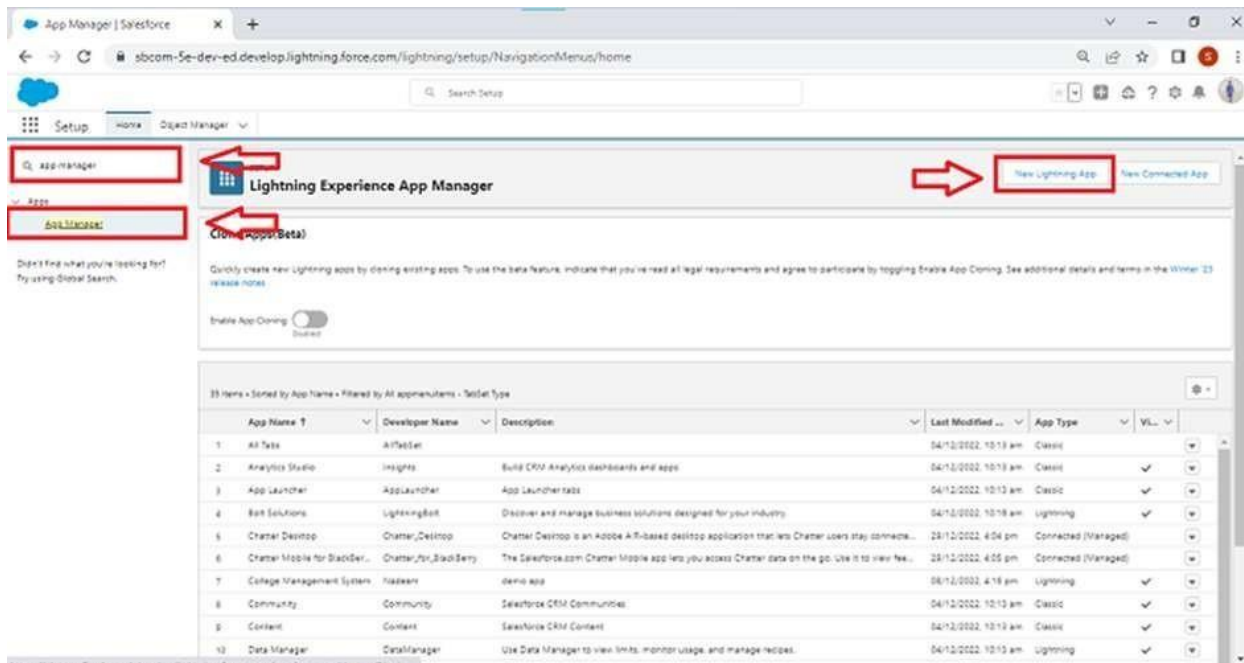

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)

2. Select Object(Item) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as default >> Save.
- Note: Now create tabs for Customer Order, Price, Billing objects.

Create a Lightning App

To create a lightning app page:

1. Go to setup page >> search “app manager” in quick find >> select “app manager” >>

3. Fill the app name in app details and branding as follow

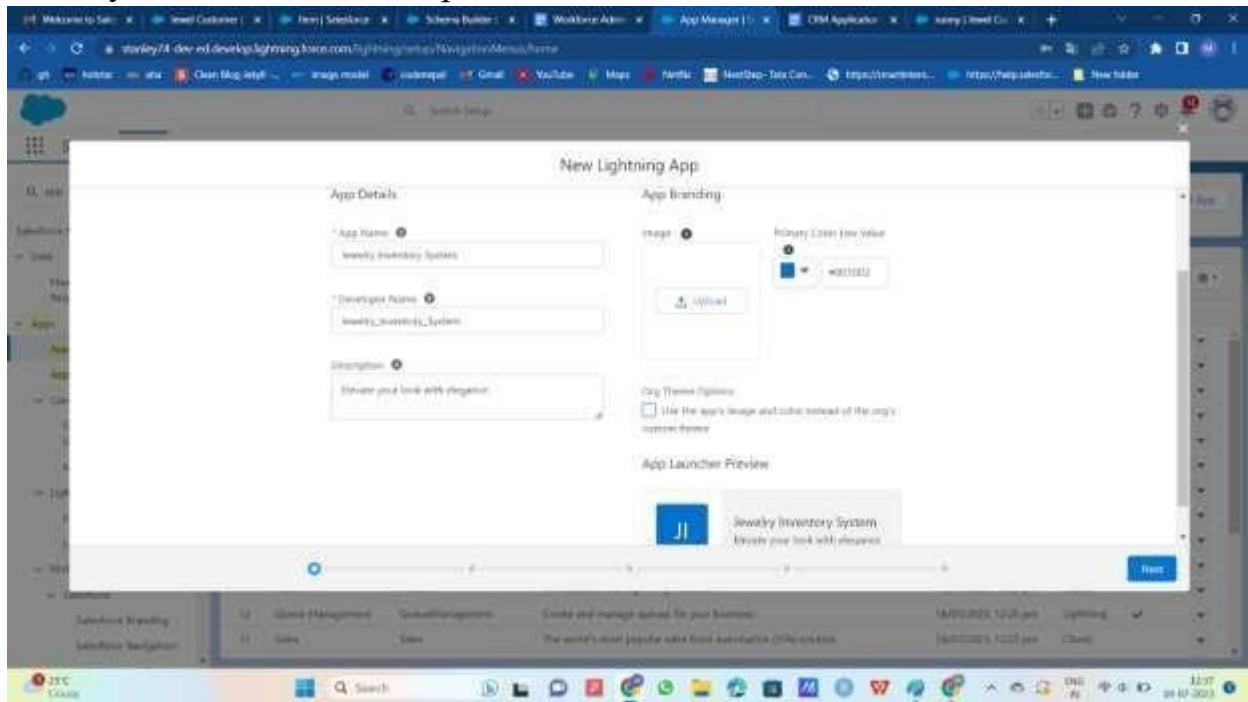

App Name : Jeweler Inventory System.

Developer Name : This will auto populated

Description : Elevate your look with elegance

Image : optional (if you want to give any image you can otherwise not mandatory)

Primary color hex value : keep this default.

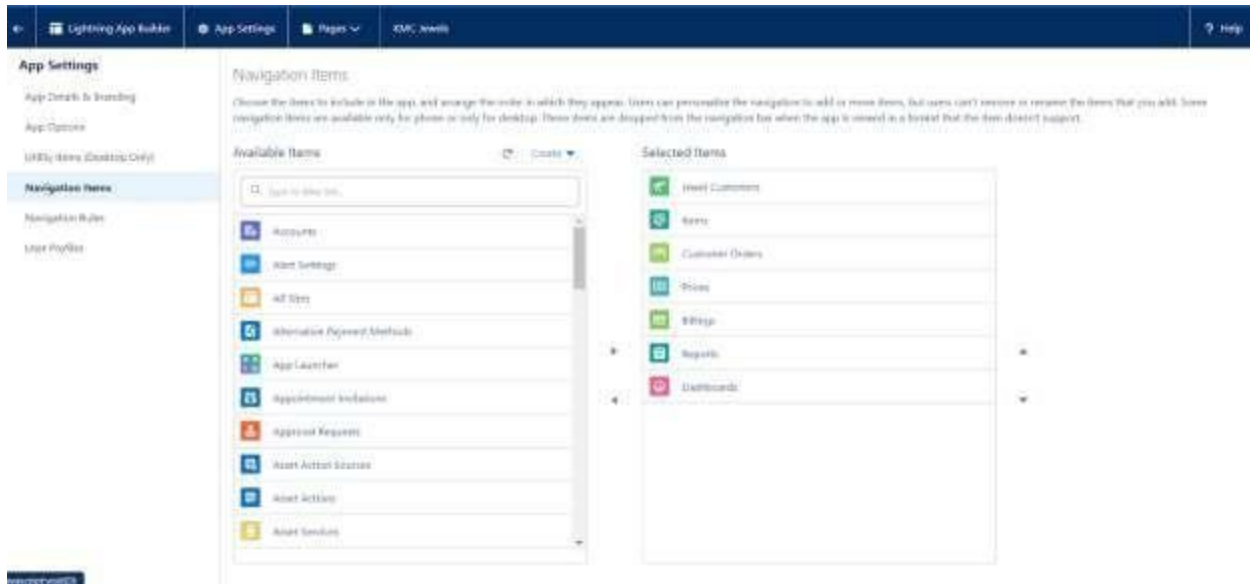

4. Then click Next >> (App option page) Set Navigation Style as Console Navigation >> Next.

5.(Utility Items) keep it as default >> Next.

6. To Add Navigation Items:

7. Search for the item in the (Jewel Customer, Item, Customer Order, Price, Billing, Reports, Dashboard) from the search bar and move it using the arrow button?
Next? Next.

8. To Add User Profiles:

Search profiles (System administrator) in the search bar >> click on the arrow button >> save & finish.

Creating Lookup Relationship

a lookup relationship is a type of relationship in salesforce that connects two objects together based on a field known as the lookup field. it establishes a relationship between a child object and a parent object, allowing the child object to reference the parent object.

To Create a relationship between Jewel Customer & Customer Order Objects.

1. Go to the setup page >> click on object manager >> type object name(Customer Order) in the quick find bar >> click on the object.
2. Click on fields & relationship >> click on New.
3. Select “Lookup relationship” as data type and click Next.
4. Select the related object “Jewel Customer”.
5. Give Field Label as “Customer” and click Next.
6. Next >> Next >> Save.

Creating a Master-Detail Relationship

Master-detail relationship is a type of relationship between two objects where the master object controls certain behaviors and settings of the detail object. Here are a few use cases that demonstrate the use of master-detail relationships

Creating Master-Detail Relationship between Item & Customer Order Object.

To Create a Master-Detail relationship:

1. Go to the setup page >> click on object manager >> type object name (Customer Order) in the quick find bar >> click on the object.
2. Click on fields & relationships >> click on New.
3. Select “Master-Detail relationship” as data type and click Next.
4. Select the related object “Item”.
5. Give Field Label as “Item” and click Next.
6. Next >> Next >> Save.

Creating Text Field in Jewel Customer Object

To create fields in an object:

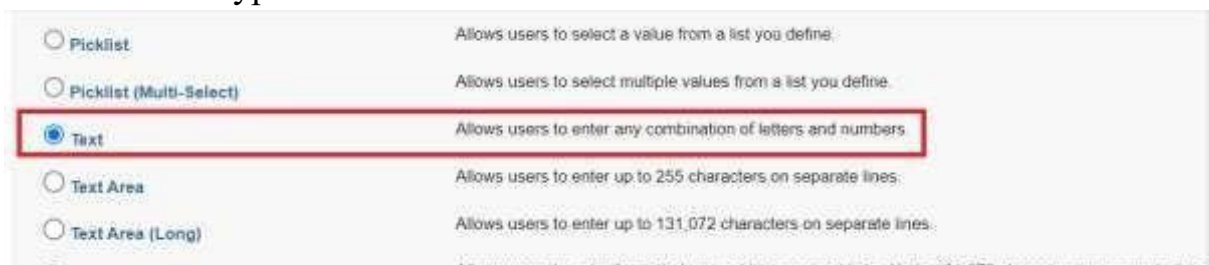

1. Go to setup >> click on Object Manager >> type object name(Jewel Customer) in quick find bar >> click on the object.

2. Now click on “Fields & Relationships” >> New

3. Select Data type as “Text”.

4. Click on Next

5.

Fill the above as following:

- Field Label: City
- Length: 20
- Field Name: gets auto generated
- Click on Next >> Next >> Save and new.

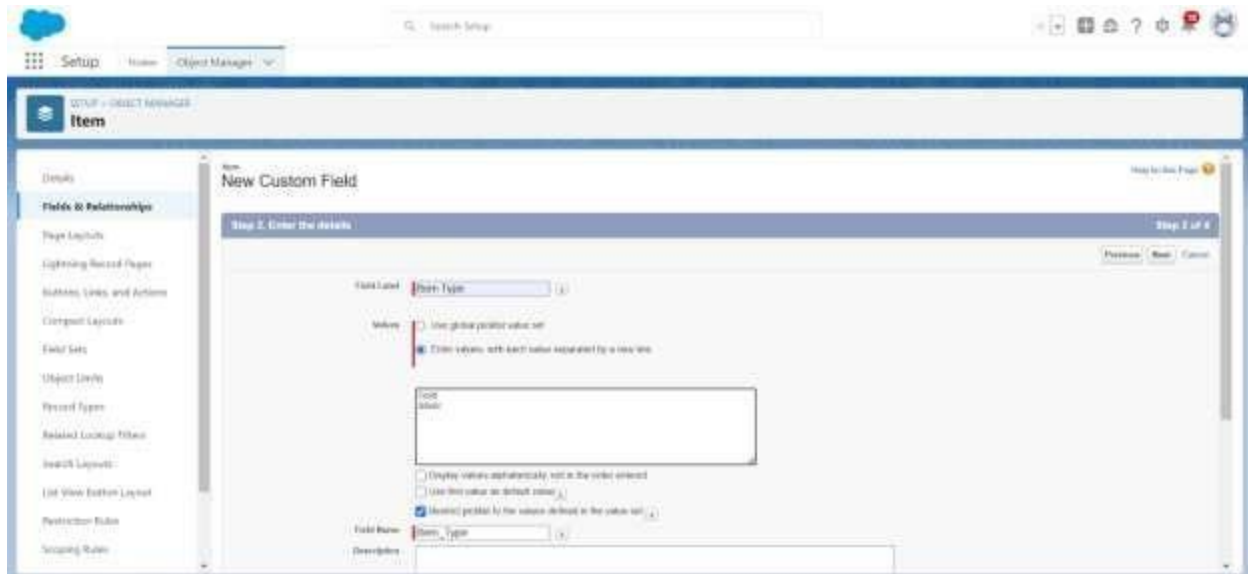

Creating the Phone field in object Jewel Customer

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name (Jewel Customer) in quick find bar >> click on the object.
2. Now click on “Fields & Relationships” >> New
3. Select Data type as “Phone” and click Next.
4. Given the Field Label as “Phone”.

1. Field Name will be auto populated, and click on Next >> Next >> Save & new.

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar>> click on the object.
2. Now click on “Fields & Relationships” >> New.
3. Select Data type as “Picklist” and click Next.
4. Enter Field Label as “Item Type”.
5. In values select “Enter values (Gold, Silver), with each value separated by a new line" and enter values as shown below.

6. Click Next? Next? Next? Save.

Creating Currency Field in Price Object

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Price) in quick find bar >> click on the object.
2. Now click on “Fields & Relationships” >> New.
3. Select Data type as “Currency” and click Next.

1. Enter Field Label as “Gold Price” and length as “8” and decimal 0. Field name will be auto generated.
2. Click Next >> Next >> Next >> Save

Creating Formula Field (Cross Object) in Item Object

Creating Remaining Fields in Objects

Now create the remaining fields using the data types mentioned.

s.no	Object name	Fields	
1	Jewel Customer		
		Field Name	Data type

Creating the Field Dependencies

Use case:

Field Dependencies are used to create relationships between fields within an object. They allow you to control the visibility and availability of fields based on the values selected in other fields.

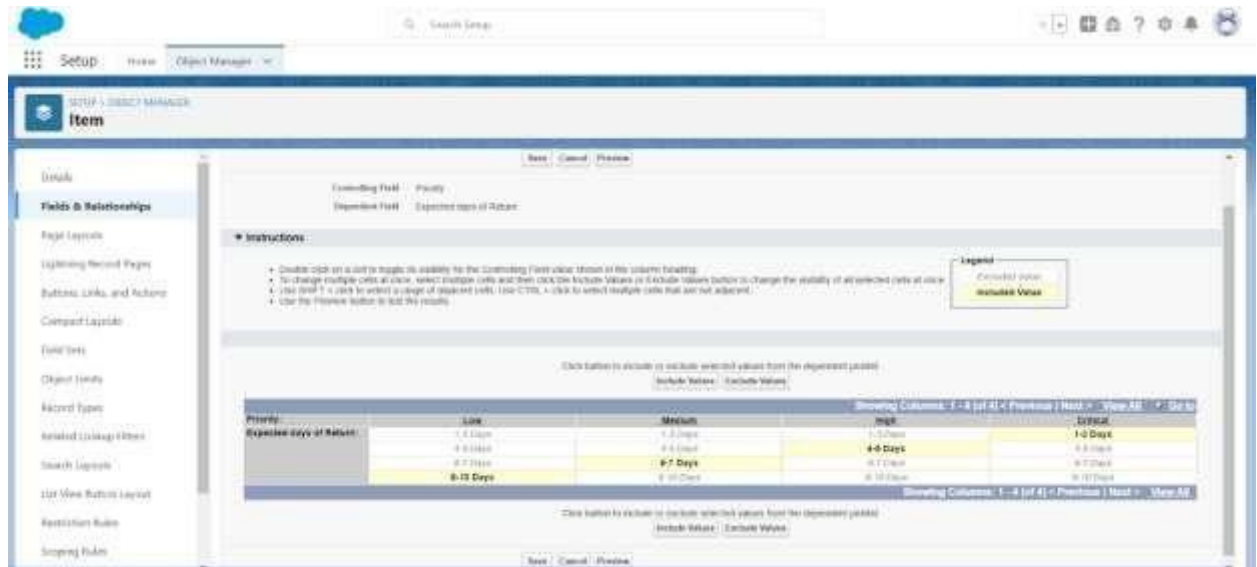

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar >> click on the object.
2. Click on Fields & Relationships and click on the Priority field.
3. Search for Field Dependencies and click on New.

The screenshot shows the Salesforce Setup interface for the 'Item' object. The left sidebar contains a navigation menu with options like 'Details', 'Fields & Relationships', 'Page Layouts', 'Lightning Record Pages', 'Buttons, Links, and Actions', 'Compact Layouts', 'Field Sets', 'Object Users', 'Record Types', 'Related Lookup Fields', 'Search Layouts', 'List View Button Layout', 'Restriction Rules', and 'Scoping Rules'. The main content area is titled 'Field Information' and displays details for the 'Priority' field, including its label, name, API name, description, help text, data source, and field usage. Below this, there are sections for 'General Options', 'Picklist Options', and 'Picklist Values Used'. At the bottom of the 'Field Information' section, the 'Field Dependencies' link is highlighted with a red box, and the 'New' button is also highlighted with a red box.

4. Select Controlling Field as “Priority” and Depending field as “Expected Days of Return” >> Continue.

The screenshot shows the 'New Field Dependency' dialog box. It contains instructions on how to create a dependent relationship between fields. Below the instructions, there are two steps: 'Step 1: Select a controlling field and a dependent field. Click Continue when finished.' and 'Step 2: On the following page, add the filter rules that control the values that appear in the dependent field for each value in the controlling field.' The 'Controlling Field' is set to 'Priority' and the 'Dependent Field' is set to 'Expected Days of Return'. The 'Continue' button is highlighted.

5. Select the “Expected Days of Return” values of related Priority values and Click on Include Values >> Save.

Creating the validation rule

Creating the validation rule for Postal Code field in Jewel Customer object

Note: check whether the fields mentioned in the formula field are created or not, if not go to activity 10 and create those fields mentioned in Jewel Customer object.

1. Go to setup >> click on Object Manager >> type object name (Jewel Customer) in quick find bar >> click on the object.
2. Click on the validation rule >> click New.
3. Enter the Error Message as “Must contain 6 digits”, select the Error location as Field and select the field as “Zip/Postal code”, and click Save.

NOTE:

Create One more Validation rule for Jewel Customer object.

1. Enter Rule name as “Validation Rule for Jewel Customer Object “.
2. Insert the Error Condition Formula as : -

$$\text{OR}(\text{ISBLANK}(\text{City_c}), \text{ISBLANK}(\text{Country_c}), \text{ISBLANK}(\text{Phone_c}), \text{ISBLANK}(\text{State_c}), \text{ISBLANK}(\text{Street_c}))$$
3. Enter the Error Message as “Please fill Required fields”, select the Error location as Top of Page and click Save.

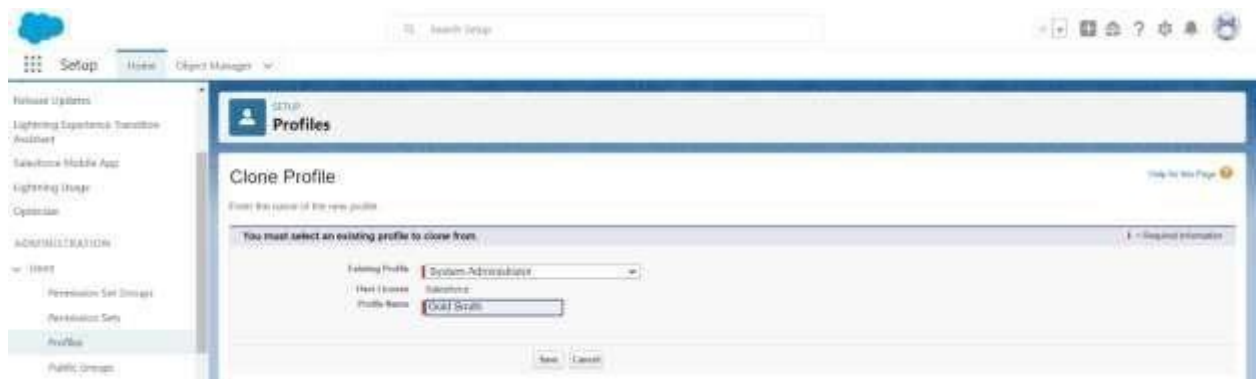

Create Validation rule for Item object.

1. Enter Rule name as “Validation Rule For Item”.
2. Insert the Error Condition Formula as : -
`OR(ISBLANK(Amount__c), ISBLANK(Customer_Name__c)
,ISBLANK(Gold_price__c),ISBLANK(KDM__c),ISBLANK(
Ornament__c),ISBLANK(Percentage__c),ISBLANK(Making_Charges__c
) ,ISBLANK(Prices__c),ISBLANK(Stone_weight__c),ISBLANK(
Silver_price__c),ISBLANK(Stone_other_price__c),ISBLANK(
Stone_weight__c),ISBLANK(Weight__c))`
3. Enter the Error Message as “Please fill Required fields”, select the Error location as Top of Page and click Save
4. Enter the Rule name as “Postal Code “.
5. Insert the Error Condition Formula as : -
`AND(
OR(
LEN(Zip_Postal_code__c) <> 6, NOT(REGEX(Zip_Postal_code__c,
"^[0-9]{6}$"))),
NOT(ISBLANK(Zip_Postal_code__c))
)
)`

Gold Smith Profile

To create a new profile:

1. Go to setup >> type profiles in quick find box >> click on profiles ? clone the desired profile (System Administrator) >> enter profile name (Gold Smith) >> Save.

2. While still on the profile page, then click Edit.
3. Scroll down to Custom Object Permissions and Give access permissions for Jewel Customer,Item,Customer Order,Prices,Billings

4. Scroll down and Click on Save.

Worker Profile

1. Go to setup >> type profiles in quick find box >> click on profiles >> clone the desired profile (Salesforce Platform User) >> enter profile name () >> Save.
2. While still on the profile page, then click Edit.
3. Scroll down to Custom Object Permissions and Give access permissions for Items, Price and Customer Order objects.
4. Scroll down and Click on Save.

Creating Gold Smith Role

1. From setup ,Go to quick find >> Search for Roles >> click on set up roles.

2. Click on Expand All and click on add role under whom this role works.

Your Organization's Role Hierarchy

3. Give Label as "Gold Smith" and Role name gets auto populated. Check to whom this role (Gold Smith) reports. Then click on Save

Roles

Role Edit

Label:

Role Name:

This role reports to:

Role Based on displayed as reports:

[Save](#) [Save & New](#) [Cancel](#)

Create one more role as Worker which reports to Gold Smith.

Creating the Role Hierarchy

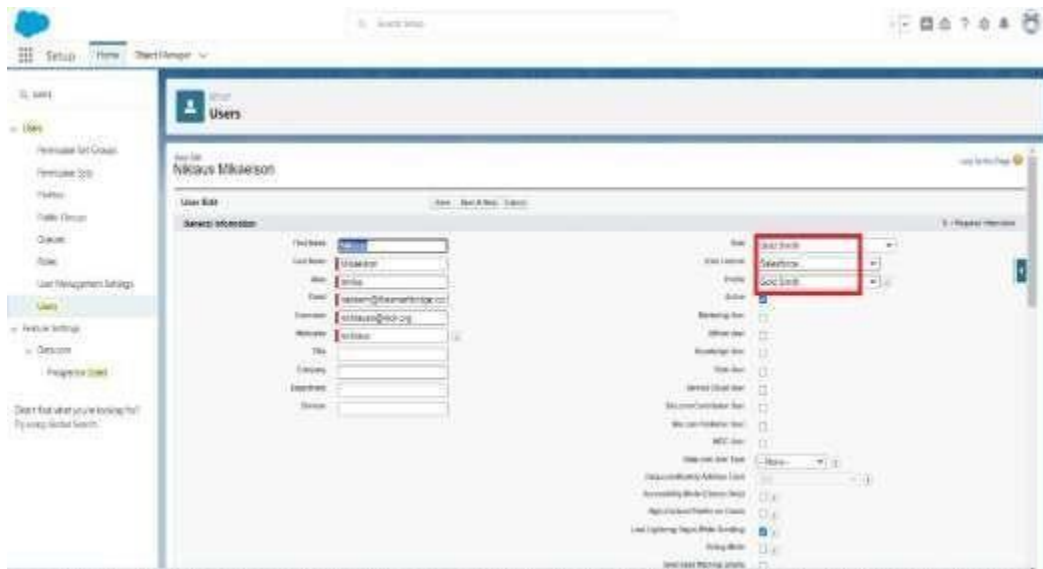

You can build on the existing role hierarchy shown on this page. To insert a new role, click [Add Role](#).

Your Organization's Role Hierarchy

Create User

1. Go to setup >> type users in quick find box >> select users >> click New user.
2. Fill in the fields
 1. First Name : Niklaus
 2. Last Name : Mikaelson
 3. Alias : Give a Alias Name
 4. Email id : Give your Personal Email id
 5. Username : Username should be in this form: text@text.text
 6. Nick Name : Give a Nickname
 7. Role : Gold Smith
 8. User licence : Salesforce
 9. Profiles : Gold Smith

1. Save.

Create User

1. Go to setup >> type users in quick find box >> select users >> click New user.
2. Fill in the fields
 - First Name : Kol
 - Last Name : Mikaelson
 - Alias : Give a Alias Name
 - Email id : Give your Personal Email id
 - Username : Username should be in this form: text@text.text
 - Nick Name : Give a Nickname

- Role: Worker
 - User licence : Salesforce Platform
 - Profiles: Worker
3. Save.

Note:

Create two more users as mentioned in activity 2 using the same profile.

Page layouts

Page Layout in Salesforce allows us to customise the design and organise detail and edit pages of records in Salesforce. Page layouts can be used to control the appearance of fields, related lists, and custom links on standard and custom objects' detail and edit pages.

Use Case:

Hurray!! you have completed the data model structure for your organisation but while looking at the detailed and edit pages it seems to be so clumsy, so decide to organise the page in a pleasant way for the sake of good and pleasant appearance and assemble all different kinds of information in different sections in order.

To Create a Gold Page layout

1. Go to Setup >> Click on Object Manager >> Search for the object (Item) >> From drop down click on Edit.
2. Click on Page layout >> Click on New.

-
- The screenshot shows the 'Create New Page Layout' dialog in the SAP Fiori 'Object Manager' app. The 'Existing Page Name' dropdown is set to 'Item Layout' and the 'Page Layout Name' text field contains 'Page Layout For GDR'. A red box highlights these two fields.

-
- The screenshot shows the SAP Fiori 'Manage Party' app. The left sidebar contains navigation options: Details, Fields in Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, and Grouping Rules. The main area displays the 'Party' object type, which is highlighted in red. Below it, a table lists the fields associated with the 'Party' object type, including 'Name', 'Address', 'Contact Information', 'Identification', 'Communication', 'Financials', 'Legal', 'Operational', and 'Other'. The 'Party' object type is also highlighted in yellow. The table shows the following fields:
- | Field Name | Field Type | Unit of Measure | Field Category | Field Subcategory | Field Description |
|---------------------|------------|-----------------|----------------|---------------------------|---------------------------|
| Name | Text | | Identification | Party Name | Party Name |
| Address | Text | | Operational | Party Address | Party Address |
| Contact Information | Text | | Communication | Party Contact Information | Party Contact Information |
| Identification | Text | | Identification | Party Identification | Party Identification |
| Communication | Text | | Communication | Party Communication | Party Communication |
| Financials | Text | | Financials | Party Financials | Party Financials |
| Legal | Text | | Legal | Party Legal | Party Legal |
| Operational | Text | | Operational | Party Operational | Party Operational |
| Other | Text | | Other | Party Other | Party Other |

1. Go to Setup >> Click on Object Manager >> Search for the object (Item) >> From drop down click on Edit.
2. Click on Page layout >> Click on New.
3. Give Page layout Name as “Page Layout for Silver” and click on Save.
4. Arrange the field as shown in the Information Section, remove fields which are related to Gold and click Ok.

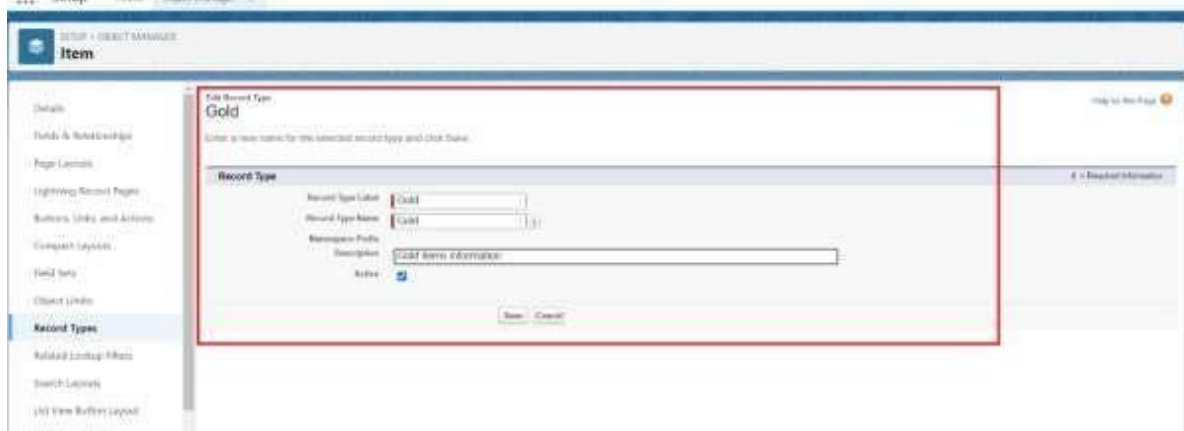

To create a Record Type

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar? click on the object.
2. Click on the Record Types >> click New.

3. Select Existing Record as “Master”, Record type Label as “Gold”, Description as “Gold items information”.

4. Uncheck for “Make Available”.

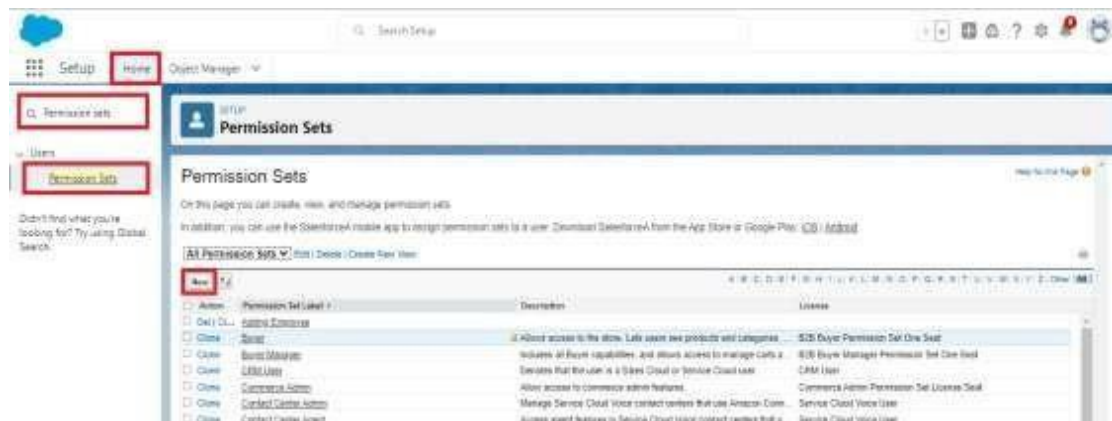

5. Scroll down and check for the Gold Smith, Worker JW & System Administrator profile and click on Next.

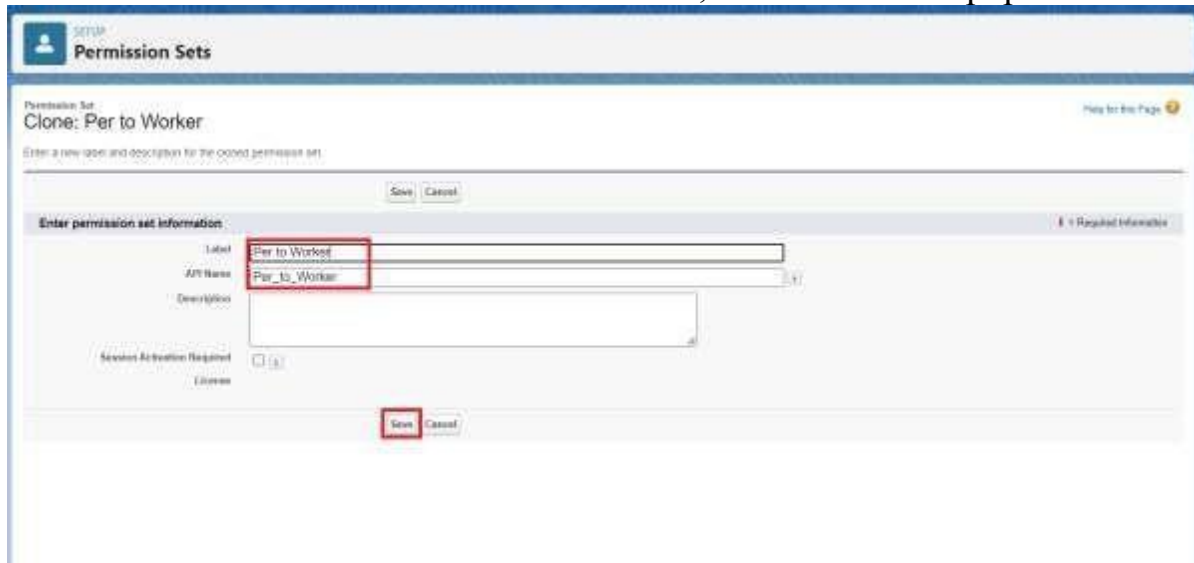

Creating permission set

A permission set is a collection of settings and permissions that give users access to various tools and functions. Permission sets extend users' functional access without changing their profiles. Users can have only one profile but, depending on the Salesforce edition, they can have multiple permission sets.

1. Go to setup >> type “permission sets” in quick search >> select permission sets >> New.

2. Enter the label name as “Per to Worker”, API will be auto populated ? save.

The screenshot shows the 'Permission Sets' setup page in Salesforce. The 'Label' field is highlighted with a red box and contains the text 'Per to Worker'. The 'API Name' field is also highlighted with a red box and contains the text 'Per_to_Worker'. The 'Save' button at the bottom is also highlighted with a red box.

3. Under Apps Select object settings.

The screenshot shows the 'Apps' settings page in Salesforce. The 'Object Settings' section is highlighted with a red box. The 'Object Settings' section includes a list of permissions: 'Assigned Apps', 'Assigned Connected Apps', 'Object Settings', 'App Permissions', 'Apex Class Access', 'Visualforce Page Access', 'External Data Source Access', 'Flow Access', 'Named Credential Access', 'Custom Permissions', 'Custom Metadata Types', and 'Custom Setting Definitions'.

4. Click on Items object? click on Edit? under Item: Record Type Assignments, enable Gold, Silver? Object permission check for read, edit and create.

Create a Trigger Handler class

Trigger handler:

A trigger handler is a design pattern that organises trigger logic into separate classes. This helps in keeping code organised, reusable, and easier to maintain. The trigger handler class contains methods that handle the specific logic for different trigger events, improving code structure and readability. This approach is particularly useful for complex triggers or projects with multiple triggers, as it promotes modular coding practices and reduces the chances of code duplication.

CODE:

```

public class UpdatePaidAmountTriggerHandler {
    public static void handleBeforeInsert(List<Billing__c> newBillings) {
        for (Billing__c billing : newBillings) {
            billing.Paid_Amount__c = billing.Paying_Amount__c;
        }
    }

    public static void handleBeforeUpdate(Map<Id, Billing__c> oldBillingsMap,
List<Billing__c> updatedBillings) {
        for (Billing__c billing : updatedBillings) {
            Billing__c oldBilling = oldBillingsMap.get(billing.Id);
            Decimal oldPaidAmount = oldBilling.Paid_Amount__c;
            billing.Paid_Amount__c = oldPaidAmount + billing.Paying_Amount__c;
        }
    }
}

```

Create the trigger

CODE:

```

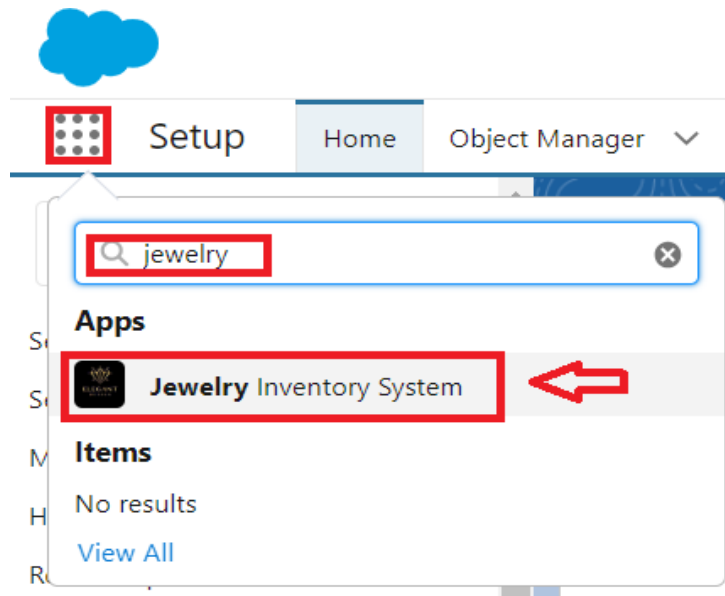

trigger UpdatePaidAmountTrigger on Billing__c (before insert, before update) {
    if (Trigger.isInsert) {
        UpdatePaidAmountTriggerHandler.handleBeforeInsert(Trigger.new);
    } else if (Trigger.isUpdate) {
        UpdatePaidAmountTriggerHandler.handleBeforeUpdate(Trigger.oldMap,
Trigger.new);
    }
}

```

Create a Record (Jewel Customer)

1. Click on App Launcher on the left side of the screen.

2. Search Jewelry Inventory System & click on it.

3. Click on Drop Down and Click on the Jewel Customer tab.
4. Click New.

5. Fill the Details and click on Save.

View a Record (Jewel Customer)

1. Click on App Launcher on the left side of the screen.
2. Search Jewelry Inventory System & click on it.
3. Click on the Jewel Customer Tab.
4. Click on any record name. you can see the details of the Jewel Customer.

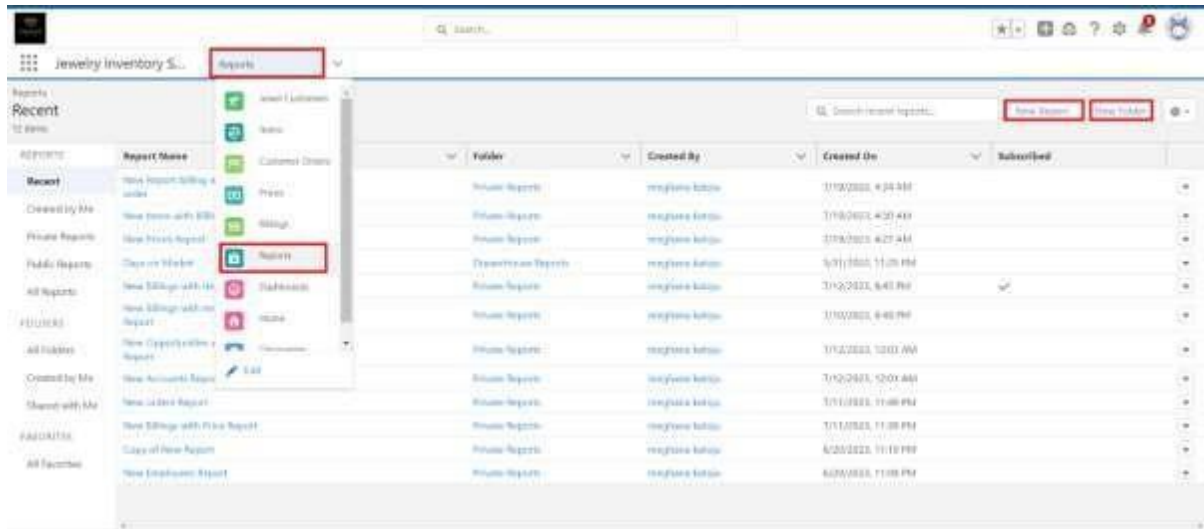

Delete a Record (Jewel Customer)

1. Click on App Launcher on the left side of the screen.
2. Search Jewelry Inventory System & click on it.
3. Click on the Jewel Customer Tab.
4. Click on Arrow at right hand side on that Particular record.
5. Click delete.

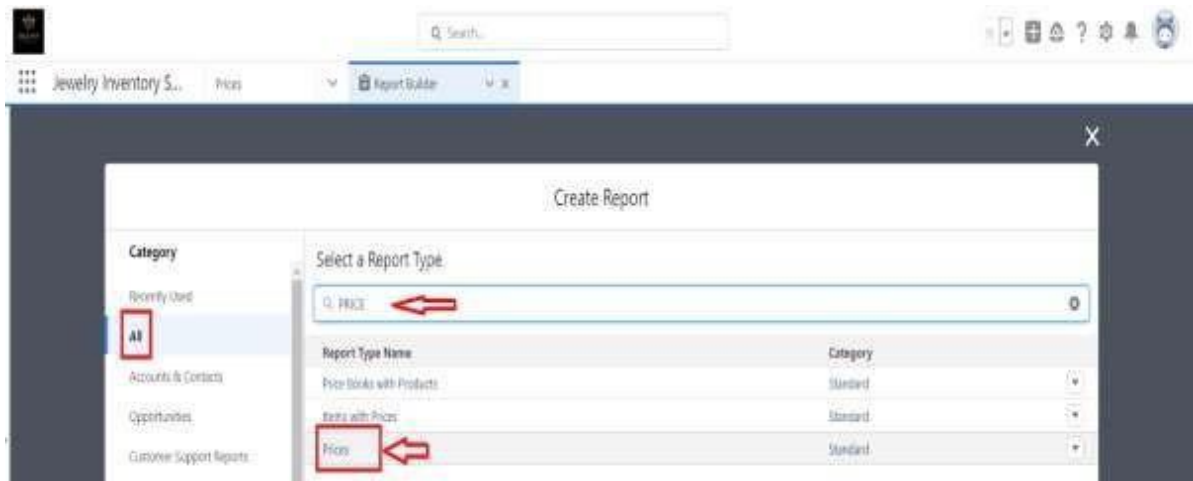

Note: Create at least 10 records for each of the objects: Jewel Customer, Price, Item, Customer Order and Billing.

Create Report

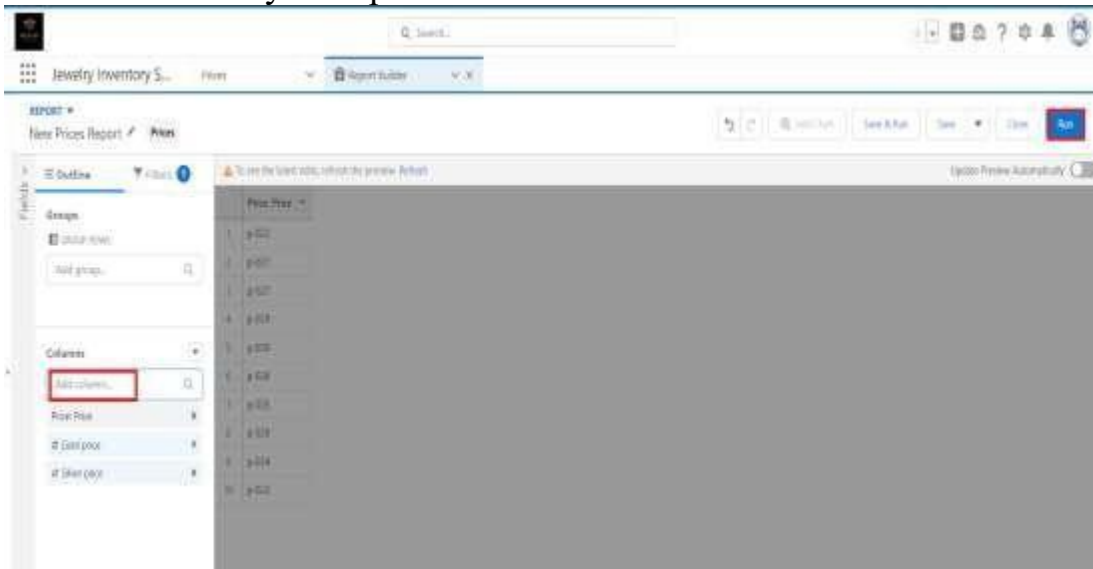

1. Go to the app >> click on the reports tab
2. Click New Report.

3. Select report type from category or from report type panel or from search panel? click on start report.

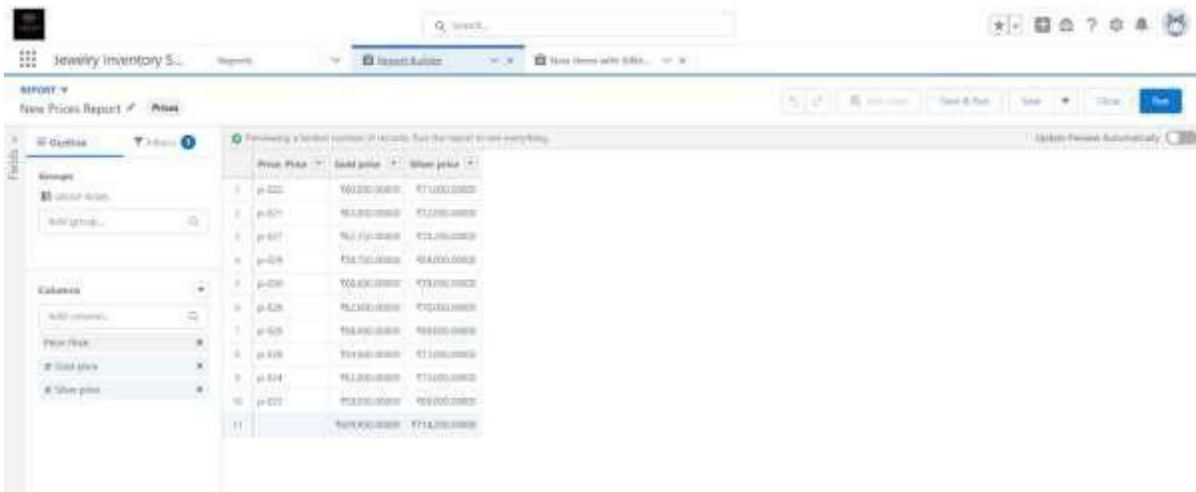

4. Customise your report

- Add fields from the left pane as shown below.

5. Save or run it.

Note: Reports may get varied from the above pictures as the data might be different.

Reports

1. Create a report with report type: “Item with Billings”.
2. Create a report with report type: “Billings with item and Customer order”

Create Dashboard

1. Go to the app >> click on the Dashboards tabs.

2. Give a Name and click on Create.

New Dashboard

*** Name**

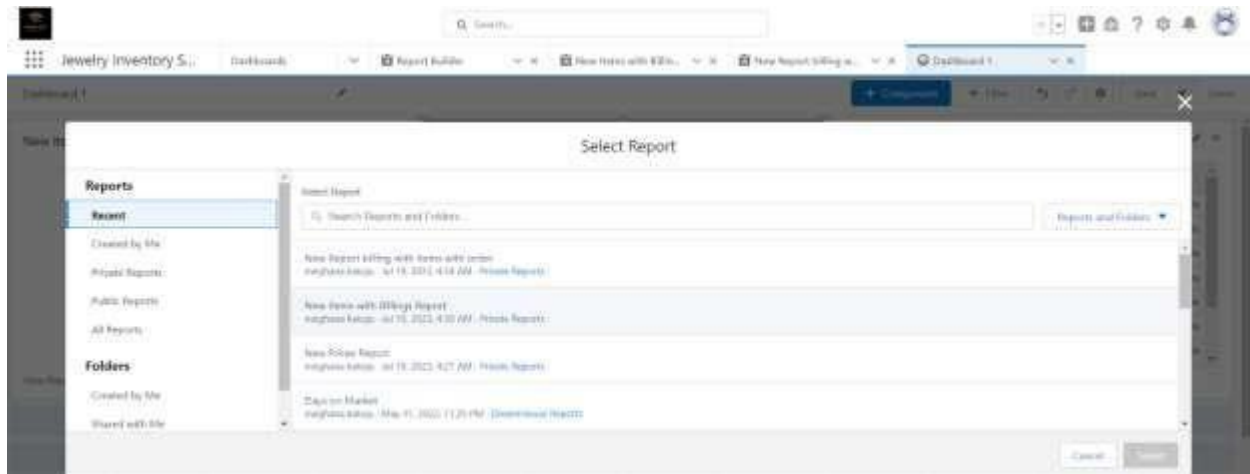

Description

Folder

3. Select add component.

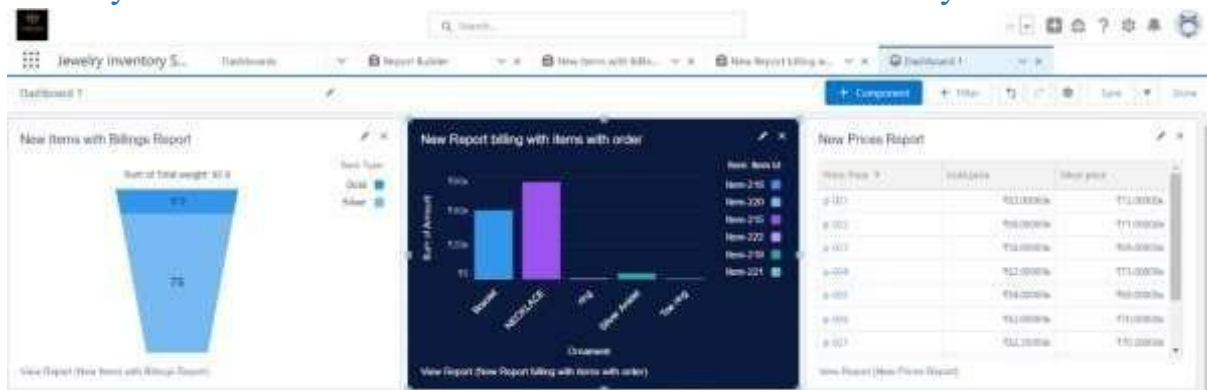

4. Select a Report and click on select.

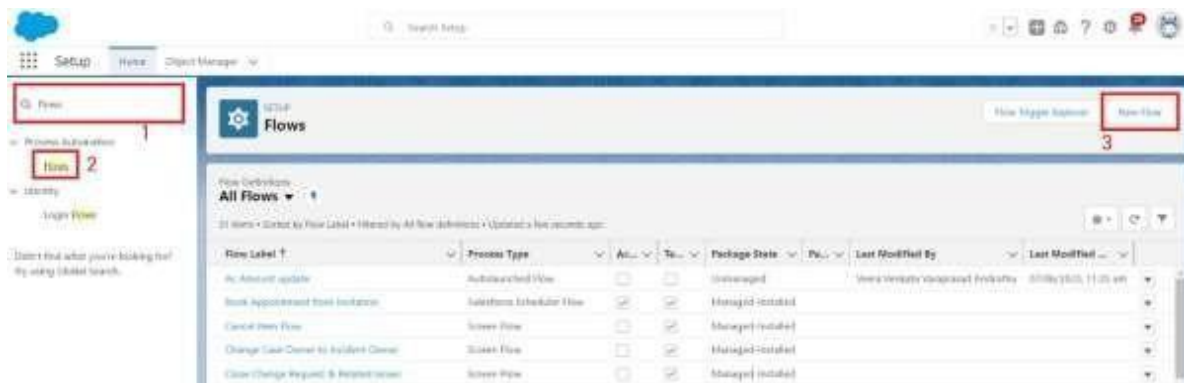

5. Click Add then click on Save and then click on Done.

Activity 2: Create another Dashboard as we discussed in activity 1.

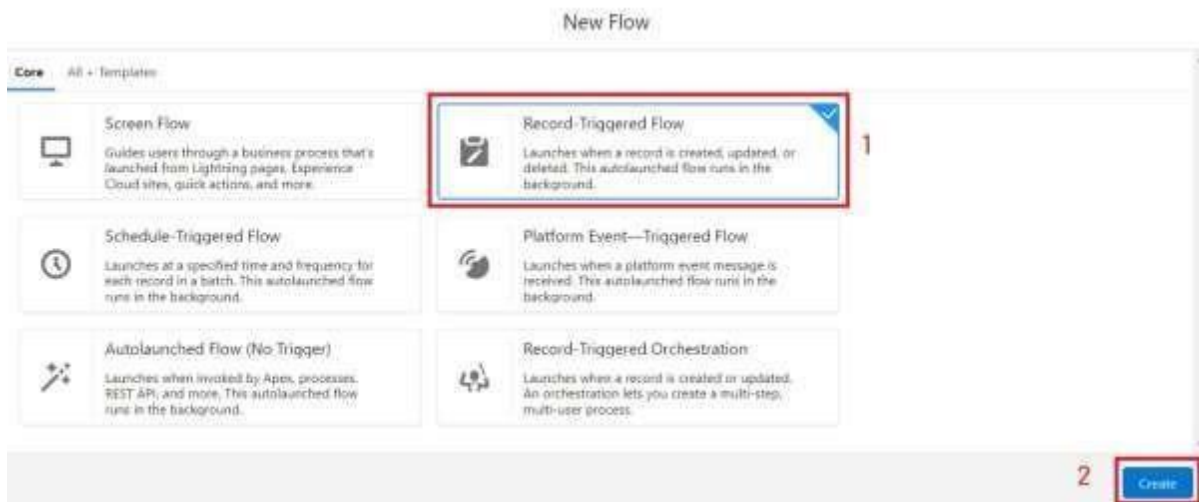

Create a Flow

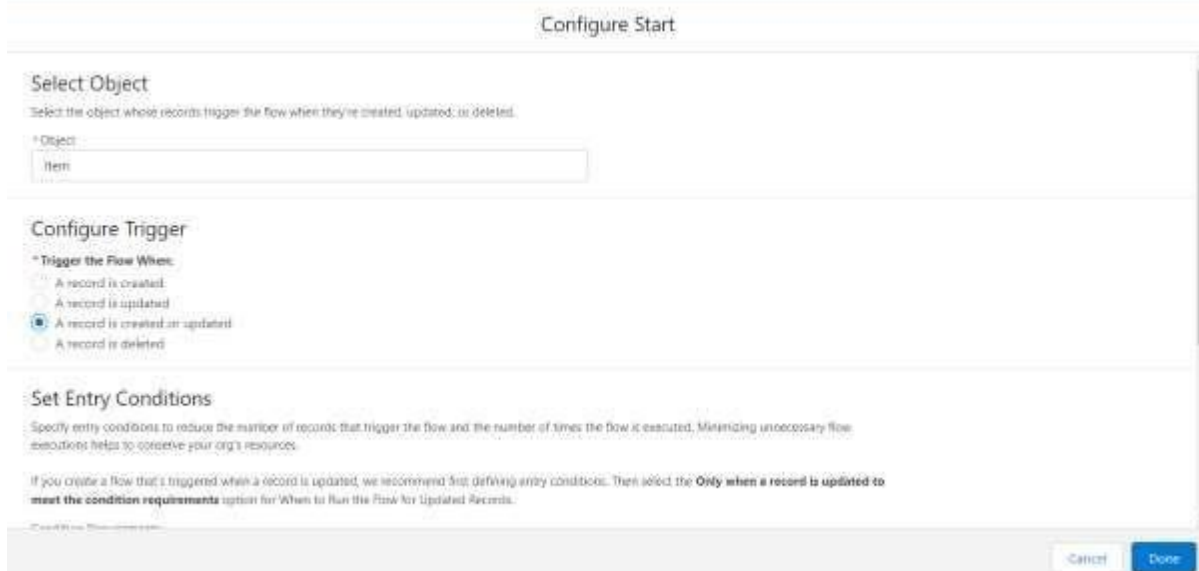

1. Go to setup >> type Flow in quick find box >> Click on the Flow and Select the New Flow.

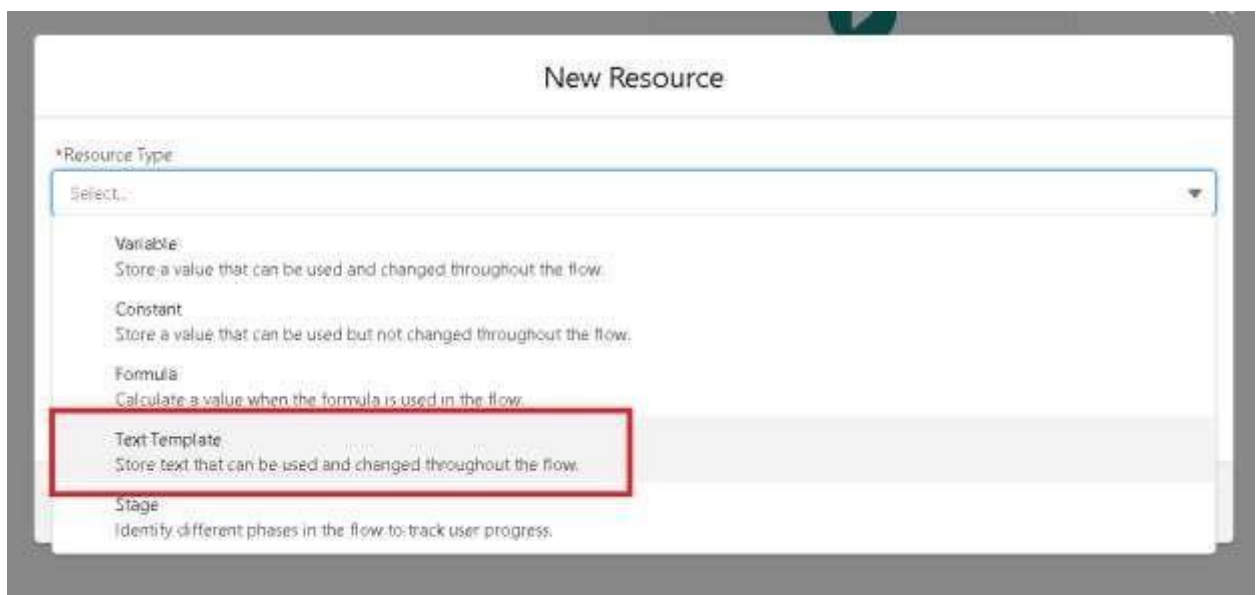

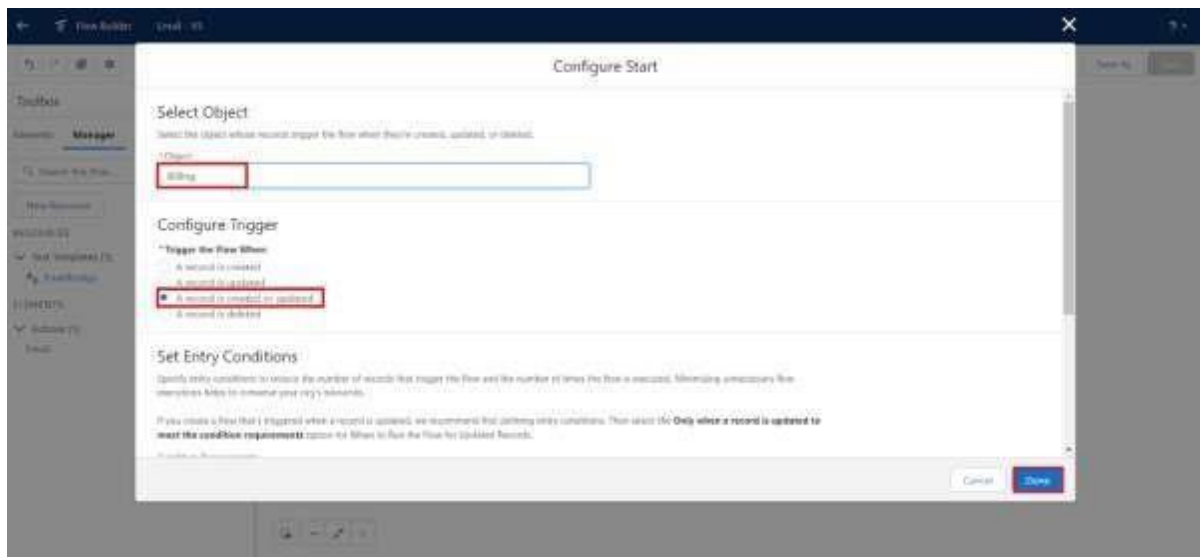

2. Select the Record-triggered flow and Click on Create.

3. Select the Object as a “Billing” in the Drop down list.
4. Select the Trigger Flow when: “A record is Created or Updated”.
5. Select the Optimise the flow for: “Actions and Related Records” and Click on Done.

6. Now change the mode from Auto-layout to free-form.
7. Now select the manger option in the toolbox, click New resource.
8. Select the resource type as text template.

9. Enter the API name as “Email body”.

Edit Text Template

* API Name

Description

* Body ⓘ

Insert a resource... Q View as Plain Text ▼

Hello
 Customer Name: {!\$Record.Item__r.Customer_Name__r.Name}

Cancel Done

10. Change the view as Rich Text? View to Plain Text.
11. In the body field paste the syntax that is given below.
 Hello
 Customer Name: {!\$Record.Item__r.Customer_Name__r.Name}
 Here are the details for the item you purchased with Jewellery Inventory System
 Item Type: {!\$Record.Item__r.Item_Type__c}
 Ornament: {!\$Record.Ornament__c}
 Weight: {!\$Record.Weight__c} grams
 Amount: {!\$Record.Amount__c}
12. Click done.
13. Now click on elements, and drag the action element into the preview pane.
14. Their action bar will be opened in that search for “ send email ” and click on it.
15. Give the label name as “notice”
16. API name will be auto populated.
17. Enable the body in set input values for the selected action.
18. Select the text template that was created.

ADVANTAGES & DISADVANTAGES

- **Centralized Customer Data** – Easy integration of customer purchase history, preferences, and trends into one platform.
- **Customization Flexibility** – CRM allows developers to tailor features like loyalty programs, offers, and personalized catalogs for jewel businesses.
- **Scalability** – Can scale the system for multiple branches or online stores with minimal additional coding effort.

- **Integration Capabilities** – Developers can integrate with POS, ERP, or e-commerce systems to streamline jewel sales and inventory management.
- **Automation Support** – Automates routine tasks like follow-ups, reminders for festivals/weddings, and client relationship tracking.
- **Data Analytics & Reporting** – Enables developers to build dashboards for sales insights, demand forecasting, and customer segmentation.
- **High Development Complexity** – Jewelry CRMs require features like gold rate updates, valuation tools, and custom catalogs, which increase coding effort.
- **Costly Implementation** – Developing advanced features (AI recommendations, cloud storage, etc.) demands high resources.
- **Integration Challenges** – Difficulties in connecting with existing jewel shop software (inventory, accounting, or POS).
- **Data Security Risks** – Sensitive customer and financial data need strong protection; failure may lead to data breaches.
- **Maintenance Overhead** – Developers must constantly update tax rules, gold price APIs, and new business requirements.

CONCLUSION

From a developer's perspective, building a **CRM Application for Jewel Management** provides immense value by streamlining customer relations, automating sales processes, and integrating inventory with client data. It empowers jewel businesses with personalized services, secure data handling, and data-driven decision-making. However, the development process also comes with challenges such as high customization demands, integration complexities, security concerns, and ongoing maintenance.

Overall, a well-designed CRM for jewel management can serve as a **powerful technological bridge** between jewelers and customers, enhancing business efficiency and customer satisfaction. For developers, it offers both **opportunities to innovate** in a niche industry and **responsibilities to ensure reliability, security, and scalability** of the solution.
